GOLD

ACVORIA PRODUCT FAMILY

Built for the weight of every gram.

A vertical ERP solution for jewelry manufacturers, workshops, and precious metal wholesalers — part of the Acvoria enterprise platform.

One ERP core. One industry, fully understood.

Acvoria Gold is not a separate company, a premium tier, or a luxury edition. It is a dedicated module within the Acvoria ecosystem — the same ERP core used across Acvoria's enterprise customers, extended with the data model, workflows, and reporting a precious metals business actually runs on.

Same architecture

Built on the Acvoria ERP core — one data backbone, shared with CRM, MRP, and Warehouse.

Industry-specific logic

Karat, weight, and purity are first-class data — not custom fields bolted onto a generic system.

Part of a family

Deploys independently or alongside other Acvoria modules as your operation grows.

Every gram is a liability until it's sold.

Jewelry businesses carry risk that generic software was never built to track.

Weight & purity get lost in translation

Spreadsheets and generic ERPs treat gold like any other SKU — karat, fineness, and net weight are afterthoughts, not structure.

Fire loss is invisible

Melting, casting, and polishing all lose material. Without tracking, shrinkage is absorbed as unexplained cost.

Manufacturing and retail don't align

Workshop production, stone-setting, and finished-goods sales run on disconnected systems and manual reconciliation.

Pricing moves faster than reporting

Daily gold and silver rates change margins in real time — most systems can't reprice inventory or quotes accordingly.

Generic ERP manages items. Acvoria Gold manages metal.

A standard inventory item has a SKU, a quantity, and a price. A gram of gold has all of that — plus karat, purity, fineness, fluctuating market value, and loss across every stage it moves through.

GENERIC ERP	ACVORIA GOLD
Tracks items by SKU and quantity	Tracks metal by weight, karat, and purity
Fixed unit cost	Live gold/silver rate applied across inventory and quotes
No concept of production loss	Fire loss and process loss tracked at each manufacturing stage
Manufacturing bolted on as a workaround	Workshop and production processes built into the core
Custom fields simulate industry needs	Karat and purity are native data structures

Everything a precious metals operation runs on.

Five capability areas, one connected system — deployed as part of the wider Acvoria platform.

Weight, Karat & Purity Tracking

Precious metal identity as core data, not an add-on.

Inventory & Stock Management

Full visibility from raw metal to finished piece.

Manufacturing & Workshop Processes

Production, casting, and loss tracked stage by stage.

Sales & Customer Management

Quotes, orders, and pricing tied to live market rates.

Reporting & Analytics

Margin, loss, and stock visibility across the business.

Every item, every gram, accounted for.

From raw bullion to a finished ring on display, Acvoria Gold tracks inventory the way a precious metals business actually thinks about it.

- Stock tracked by weight, karat, and item type — not generic SKUs.
- Raw material, work-in-progress, and finished goods visible in one view.
- Multi-location and multi-showroom inventory on a single data backbone.
- Low-stock and critical-material alerts before a shortage stops production.

Purity and weight, tracked at every step.

Gold, silver, and mixed-karat inventory carry their true identity through the entire operation — not just at intake.

Karat-native records

Every item carries karat and fineness as structured data, from raw material to finished piece.

Weight at every stage

Gross, net, and stone weight tracked separately and reconciled automatically.

Stone & setting detail

Gemstone weight, count, and setting type recorded alongside the metal.

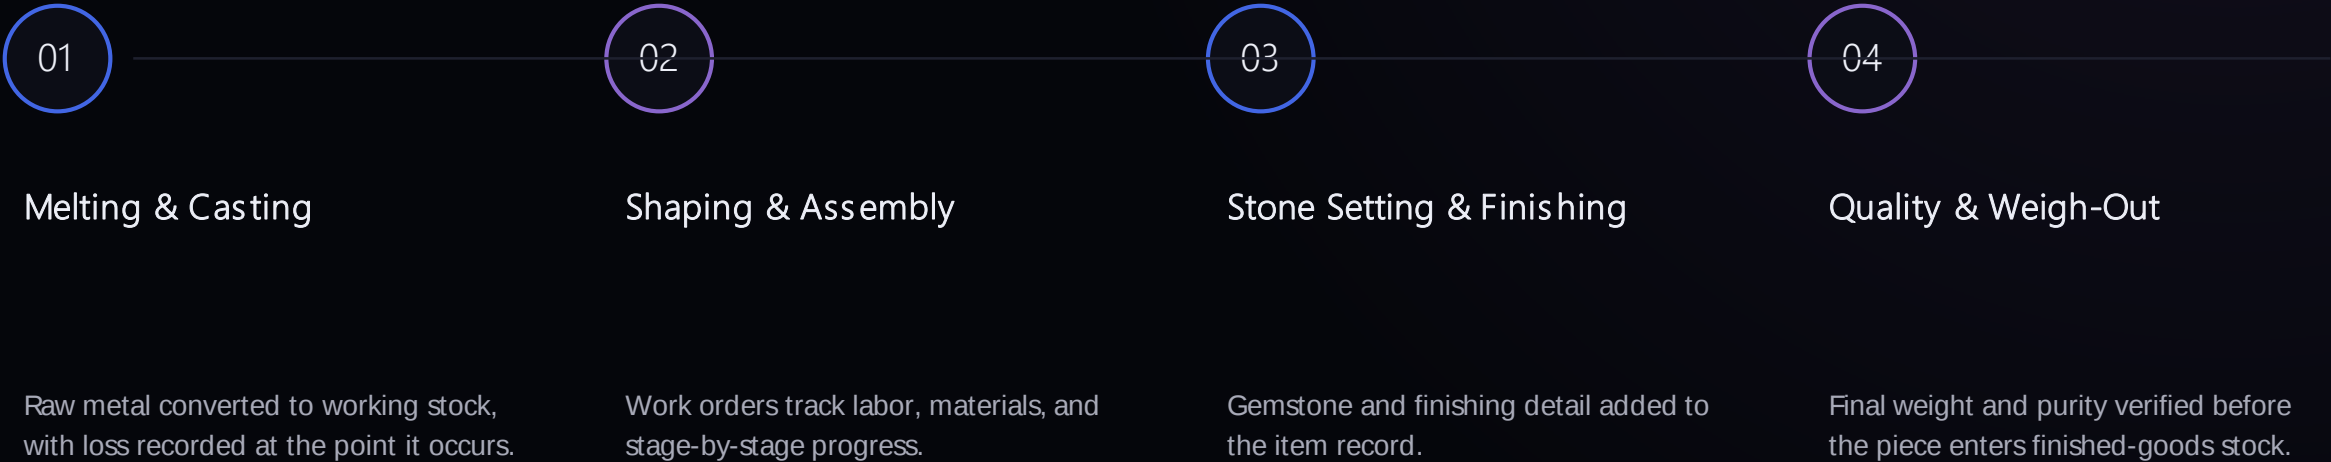

Fire & process loss

Melting, casting, and polishing loss captured stage by stage instead of absorbed as unexplained shrinkage.

From raw metal to finished piece, on one line.

Workshop production connects directly to inventory and sales — no separate system, no manual handoff.

Quotes and pricing that move with the market.

Gold and silver prices change daily. Acvoria Gold keeps sales, quotes, and customer records aligned with live rates instead of static price lists.

Live rate-based pricing

Quotes and invoices calculated against the current gold or silver rate, plus making charges.

Customer & order history

Full purchase and repair history per customer, tied to the same CRM used across Acvoria.

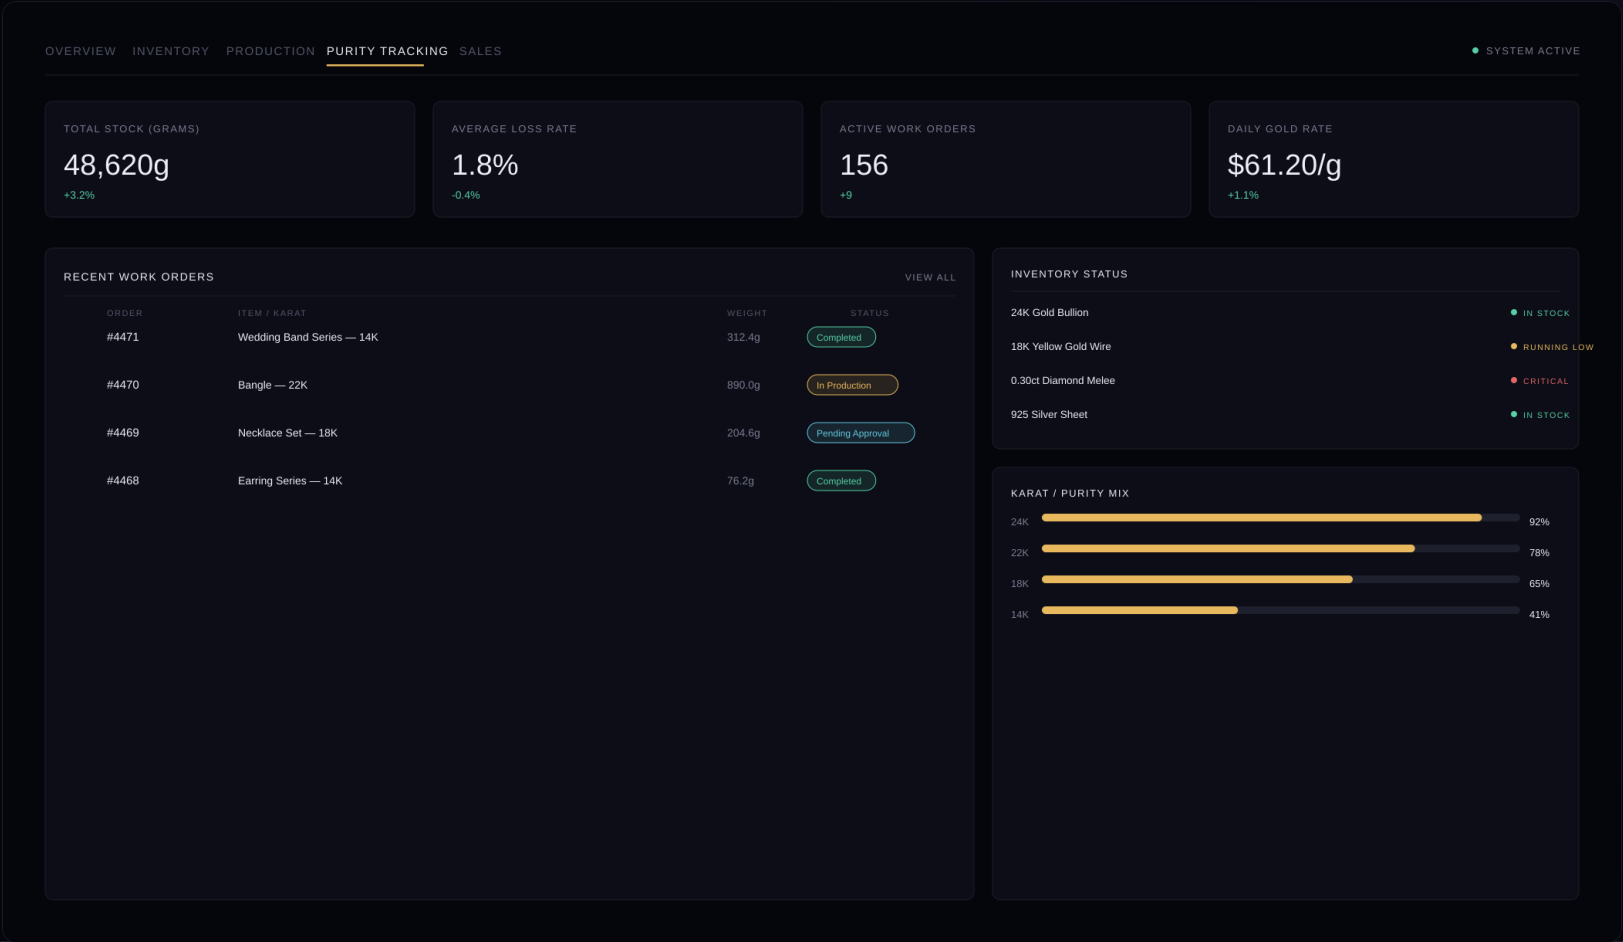

Buy-back & exchange

Old-for-new exchange and buy-back transactions tracked with accurate weight and purity reconciliation.

Margin and loss, visible at a glance.

Reporting built around the metrics a precious metals business actually manages daily.

AI

The same decision-intelligence layer used across Acvoria, applied to precious metal operations.

DEMAND FORECASTING

Production and purchasing recommendations based on historical sales and seasonal demand.

ANOMALY DETECTION

Automatic flagging of unexpected loss, stock deviation, or pricing irregularities.

NATURAL LANGUAGE QUERIES

Ask questions about stock, margin, or production in plain language.

Connected to the rest of your operation.

Acvoria Gold shares its data backbone with the wider Acvoria platform — deploy it standalone, or alongside the modules you already run.

Acvoria ERP Core

Shared financial and operational backbone across every module.

Acvoria CRM

Unified customer and order history across sales channels.

Acvoria MRP

Production planning logic extended to precious metal workflows.

Acvoria E-Invoicing

Regulatory and e-document integration for compliant invoicing.

Built to grow with the industry it serves.

Acvoria Gold follows the same long-term, process-driven approach as the rest of the Acvoria platform.

Deeper AI-assisted pricing

Extending Acvoria AI's forecasting and anomaly detection further into daily rate management.

Expanded marketplace connectivity

Continued integration work as Acvoria's partner ecosystem grows.

Ongoing compliance alignment

Regulatory and e-invoicing capability evolved alongside Acvoria's core platform.

Roadmap items reflect current product direction and may evolve.

Let's build the architecture behind your gold business.

Get in touch to see how Acvoria Gold fits into your operations — standalone, or as part of the wider Acvoria platform.
